

VEGA

Date: 07/02/2019

Guide: TEENU V THERESA

1. Project Overview?

'Vega' a web-based booking system was constructed to allow members to book facilities from any computer that has Internet access. Provision was made for those members who do not wish to use the online system.

The key objective of this project is to produce an effective automated booking solution for a small to medium sized sports club. The registered users can search and can find appropriate ground for their sport event. Ground are owned by certain individuals or organizations and they are adding the details to the site. Ground are allocated to event managers. And the event managers can again allocate this ground to several clubs. Also, they are providing the food facilities for the registering club.

2. To what extend the system is proposed for?

- *Fully automated*

3. Specify the Viewers/Public which is to be involved in the System?

- Public
- Ground owners

4. List the Modules included in your System?

- **Registration:** *All the users of site want to register, including owners of ground, event manager and several club*
- **Booking:** *This module helps to find appropriate ground for several sports event by clubs and event managers*
- **Event allocation:** *Event Manager can allocate the ground for several small clubs according to their use*
- **Chatting:** *Communication between ground owner and event manager, between event manager and clubs are also possible.*

5. Identify the users in your project?

- **ADMIN**

- *Managing registration*
- *View feedback*
- *Approval*

- *Registration*
- *Search ground*
- *View new matches*

6. Who owns the system?

Developer

7. System is related to which firm/industry/organization?

Sports, clubs

8. Details of person that you have contacted for data collection?

- *Ground owners*
- *clubs*

9. Questionnaire to collect details about the project? (min 10 questions, include descriptive answers, attach additional docs (e.g. Bill receipts, certificate models), if any?)

➤ What is your opinion about automate the existing ground booking system by a website?

It will be good idea we can reduce large overload of existing manual booking by this and also large users can access large details about various ground nearby.

➤ Is there any need any cancelation policy for this system?

Of course, Cancellation policies vary from provider to provider. You need to know exactly what your provider expects. Know specifically how far in advance you can cancel without being charged.

➤ How is the billing system work?

Many ground companies share billing information directly on their websites. Users can directly book their ground using online payment system

➤ How the clubs get information about various events?

The website must provide notifications to various clubs registered in the system. The home screen of the system also contains various events information's.

➤ How can authenticate a ground?

The system must charge some amount of money for registration of a ground

- Does the system is implemented for only for sports?

Yes, its only used for sports events

- Does the system provide seat booking facility?

Of course, the ground which have seating facility can add details about their seating capacity and normal users can book their seats.

- To what extend the system is proposed for?

The key objective of this project is to produce an effective automated booking solution for a small to medium sized sports club. The registered users can search and can find appropriate ground for their sport event. Ground are owned by certain individuals or organizations and they are adding the details to the site. Ground are allocated to event managers. And the event managers can again allocate this ground to several clubs. Also, they are providing the food facilities for the registering club.

- Is there a specific type of advertisement to be posted to your website?

Yes , advertisement related to sports event and sponsorship

- Can any users get revenue from your websites ?

Yes , ground owners can get income by booking of their grounds and developer can also get some revenue in the basis of registered user
